EXAMINATION REPORT - SEPARATE SHEET

Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Reference is made to the following document:

US 3 813 027

- 2. D1 discloses a packaging unit from which the subject-matter if claim 1 differs in that the portions reflecting the shape of an egg re located on substantially planar end faces of the cover part. This solves the problem of providing a clear information as to the contents of the package. The ends of the cover of D1 are rounded in order to better accommodate the eggs, but these rounded portions are not made on flat surfaces (therefore the subject-matter of claim 1 is novel). The provision of the rounded portions on a flat surface enhances them being perceived as egg-shaped, which is not suggested by the available prior art (therefore said subject-matter is inventive).
- 3. Since claims 2 to 39 depend on claim 1, also their subject-matter meets the requirements of Article 33(2) and (3) PCT.

AMENDED CLAIMS

PCT/DK 02/00891

1. A display and distribution packaging unit for eggs or similar fragile articles, said unit being made of an opaque material, e.g. moulded pulp and comprising:

- a bottom part (2) comprising non-planar side surfaces of compartments (4) so as to match at least partially the outer contours of the eggs contained within said unit;
 - a cover part (3) comprising a top surface (10) and substantially planar front- and rear surfaces (14, 15);
- where said cover part (3) comprises portions (8) reflecting the shape of the eggs contained within said unit, said portions (8) being located on substantially planar end faces (20) of said cover part (3) at either one or both longitudinal ends of the cover part (3).
- 2. A display and distribution packaging unit according to claim 1, where said portions (8) reflecting the shape of the eggs each comprises substantially a quarter of the total surface area of the corresponding egg.
 - 3. A display and distribution packaging unit according to claim 1 or 2, where said substantially planar surfaces of the cover part (3) comprising said portions (8) reflecting the shape of the eggs contained in the unit are one or more of the surfaces comprising said top surface (10), front surface (14) and rear surface (15).
- 4. A display and distribution packaging unit according to any one of the preceding claims, where said portions (8) reflecting the shape of the eggs are formed as portions of solids of revolution with an axis of revolution substantially normal to said top surface (10) of the cover part (3).
- 5. A display and distribution packaging unit according to claim 1, where said nonplanar side surfaces of the bottom part (3) are shaped as a portion of the surface of an egg.
 - 6. A display and distribution packaging unit according to claim 5, where said nonplanar side surfaces of the bottom part (3) are formed as portions of solids of

15

30

35

revolution with an axis of revolution substantially coinciding with said axis of revolution of said portions (8) in the cover part (3).

- 7. A display and distribution packaging unit according to any of the preceding claims, where said egg-shaped portions of the cover part (3) continues in said corresponding egg-shaped portions of the bottom part (2), the corresponding portions in the cover part (3) and in the bottom part (2) thereby forming a continuous portion of the surface of an egg.
- 8. A display and distribution packaging unit according to any of the preceding claims, where said egg-shaped portions (8) located at one longitudinal end or both longitudinal ends of the cover part (3) together with the corresponding egg-shaped portions in the bottom part (2) correspond to a major portion of the surface of an egg.
 - 9. A display and distribution packaging unit according to claim 8, where said major portion of the surface of an egg constitutes not less than approximately 60% of the total surface of an egg.
- 10. A display and distribution packaging unit according to claim 1, where said cover part (3) on those portions (8) hereof which are formed to reflect the eggs in the unit, has a different surface structure than the remaining portions of the cover part.
- 11. A display and distribution packaging unit according to claim 10, where said surface structure is relatively smooth and the surface structure of the remaining surfaces of the unit is relatively coarse.
 - 12. A display and distribution packaging unit according to claim 10, where said surface structure is relatively coarse and the surface structure of the remaining surfaces of the unit is relatively smooth.
 - 13. A display and distribution packaging unit according to claim 1, 10, 11 or 12, where said bottom part (2) on those portions hereof, which are formed to match the contours of the eggs in the unit, has a different surface structure than the remaining portions of the cover part.

14. A display and distribution packaging unit according to claim 13, where said surface structure is relatively smooth and the surface structure of the remaining surfaces of the unit is relatively coarse.

5

20

30

35

- 15. A display and distribution packaging unit according to claim 13, where said surface structure is relatively coarse and the surface structure of the remaining surfaces of the unit is relatively smooth.
- 16. A display and distribution packaging unit according to claim 1, where said cover part (3) on the planar front side (14) hereof is provided with at least one opening (9) for engagement with one or more protrusions (7) provided on said bottom part (2).
- 17. A display and distribution packaging unit according to claim 16, where said engagement between the one or more protrusions (7) and corresponding openings (9) is a tight engagement around the complete circumference of the protrusion (7).
 - 18. A display and distribution packaging unit according to claim 16, where the shape of said openings (9) and corresponding protrusions (7) substantially correspond to a longitudinal cross-section through an egg.
 - 19. A display and distribution packaging unit according to claim 16, where the outer surface of said protrusions (7) is substantially planar.
- 20. A display and distribution packaging unit according to claim 16, where said outer surface of the protrusions (7) is flush with said front surface (14) of the cover part (3).
 - 21. A display and distribution packaging unit according to claim 16, where the lower edge portion of said protrusions (7) is flush with said front surface (14) and where the upper edge portion of said protrusions (7) extends outwardly relative to the front surface (14).
 - 22. A display and distribution packaging unit according to any of the preceding claims, where said top surface (10) and/or said front surface (14) and/or said rear

15

25

30

surface (15) of the cover part (3) is/are provided with graphical and/or pictorial information and/or embossing.

- 23. A display and distribution packaging unit according to any of the preceding claims, where said outer surface of the protrusions (7) is provided with graphical and/or pictorial information and/or embossing.
 - 24. A display and distribution packaging unit according to any of the preceding claims, where said bottom part (2) and said cover part (3) are connected to each other by means of a hinge portion (12) extending along one edge portion of the interface between said bottom and cover parts (2, 3).
 - 25. A display and distribution packaging unit according to any of the preceding claims, where the interface between said cover part (3) and said bottom part (2) inclines downwardly from the rear side of the package unit to the front side hereof, thus yielding a higher front side (14) of the cover part (3) than rear side (15) of the cover part.
- 26. A display and distribution packaging unit according to claim 25, where said interface is curved.
 - 27. A display and distribution packaging unit according to claim 1, where the lower edge of said front surface (14) of the cover part (3) is curved in a downward direction beneath the interface between said cover part (3) and said bottom part (2) for extension of the area of the front surface (14) and for facilitating opening of the unit.
 - 28. A display and distribution packaging unit according to claim 27, where the downward extension of the front surface (14) covers up to the total height of the bottom part (2).
 - 29. A display and distribution packaging unit according to any of the preceding claims, where said bottom part (2) on the under side (18) hereof is provided with a pattern of supporting ribs (11) connecting base portions (19) of the egg-shaped

10

15

20

compartments (4) in the bottom part (2), whereby the mechanical strength of the unit is increased.

- 30. A display and distribution packaging unit according to claim 29, where said base portions (18) and said supporting ribs (19) define a substantially planar surface for placement of the unit.
 - 31. A display and distribution packaging unit according to claim 29, where said base portions (18) and said supporting ribs (19) define a surface for placement of the unit, the central portions of which surface are elevated with respect to the peripheral portions hereof.
 - 32. A display and distribution packaging unit according to any of the preceding claims, where said one or more protrusions (7) are provided on a flexible flap (6) placed along one upper edge portion of the bottom part (2).
 - 33. A display and distribution packaging unit according to claim 32, where portions of said flexible flap (6) are formed such that they constitute a part of the walls of adjacent compartments (4).
 - 34. A display and distribution packaging unit according to any of the preceding claims 18 to 23, where the size of said planar face of the protrusions approximately corresponds to the size of the fingertip of a thumb.
- 25 35. A display and distribution packaging unit according to any of the preceding claims 18 to 23, where the size of said planar face of the protrusions is within the range (20 mm to 30 mm) x (15 mm to 20 mm).
- 36. A display and distribution packaging unit according to any of the preceding claims, where said unit is formed as one integrated unit in one material.
 - 37. A display and distribution packaging unit according to any of the preceding claims, where said compartments (4) of the bottom part (2) and said corresponding portions (8) of the cover part (3) reflecting the shape of the eggs in the unit define

internal surfaces in the unit, which surfaces correspond to a portion of the total surface of an egg.

- 38. A display and distribution packaging unit according to claim 37, where said internal surfaces in the unit correspond to at least 60% of the surface of an egg.
- 39. A display and distribution packaging unit according to claim 37 or 38, where said compartments (4) are furthermore provided with support structures (26) for the ends of the eggs (25) in the compartments.

EXAMINATION REPORT - SEPARATE SHEET

Re Nem V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Reference is made to the following documents:

D1: US-A\3 813 027

D2: DE 195\30 156 A

D3: LU 79 834 A

D4: FR-A-2 731 986

D5: FR-A-2 133 2\square

D6: GB 329 846 A

- D1 discloses (see in partioular fig. 7; the reference numbers relating to this document) a display and distribution packaging unit for eggs, said unit being made of moulded pulp and comprising:
 - a bottom part comprising non-planar side surfaces (18, 21) of compartments so as to match at least partially the outer contours of the eggs contained within said
 - a cover part comprising a top sulf (25) and substantially planar front (26) and rear surfaces;

where said cover part comprises portion (28) reflecting the shape of the eggs contained within said unit,

where said eg-shaped portions of the cover par continue in said corresponding eggshaped portions of the bottom part, the corresponding portions in the cover part and in the bottom part thereby forming a continuous parties of the surface of an egg.

It should be noted that, looking at the figures of the present application, for instance figure 3a, there is shown a rim (in the continuation of the hinge (12)), which separates the bottom part from the cover. Therefore, the terms "the egg-shaped portions of the cover part continue in [the] corresponding egg-shaped portions of the bottom part" must be so interpreted that the egg-shaped portions have contours shaped and positioned such that prolonging them towards each other will result in a continuous egg shape. This is also the case of the container of D1, as can be seen from figures 6 and 7 of this document.

The unit of D1 having thus all the technical features of the subject-matter of claim 1, the latter is not new.

--- AVAILABLE COPY

3.

A unit according to claim 1 is further disclosed in D2 (fig. 1).

- 4. Desendent claims 6-10, 17, 18, 20, 21, 23-25, 30, 33-35 and 37-40 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of novelty, because the additional features of claims 6-10, 17, 20, 21, 23-25, 33-35 and 37-40 are known in combination from D1, and the additional features of claims 18 and 30 are known in combination from D2.
- Dependent claim 2-5, 11-16, 26, 31, 32 and 36 do not contain any features which, in 5. combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of inventive step, the reasons being as follows:
 - the additional features of claims 2-5 are known from D3 (fig. 2);
 - the additional features of claims 11 to 16 relate to the aesthetics of the package. Making some parts of an object coarse and others smooth in relation with the printing of said parts is generally known, see D4. Now, defining which parts will have the coarse structure, and which ones will have the smooth structure is only a choice dictated by aesthetic considerations:
 - the additional features of claim 26 are from D5;
 - the additional features of claims 31 and 3 are known from D6, and
 - the additional features of claim 36 are a mere Matter of design and are directly dictated by the intended use of the protrusions (being pushable by a finger).
- The combination of the features of dependent claims 19,22, 27 and 28 is neither 6. disclosed in, nor suggested by the available prior art. The subject-matter of these claims therefore meets the requirements set forth in article 33(1) PCT. Since claim 29 depends on claim 28, its subject-matter meets said requirements too.
